AI ASSISTED CODING

NAME:K. Shiva Shankar
ROLL NO:2403A510E5
ASSIGNMENT:4.1

**Task #1 – Zero-Shot Prompting with Conditional Validation**

Objective

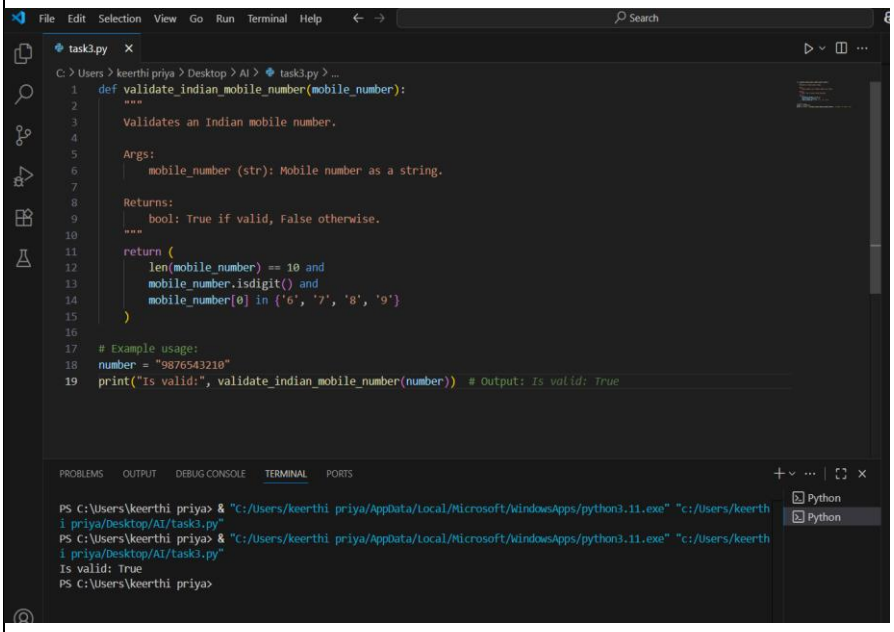
Use zero-shot prompting to instruct an AI tool to generate a function that validates an Indian mobile number.

Requirements

- The function must ensure the mobile number:
  - Starts with 6, 7, 8, or 9
  - Contains exactly 10 digits

Expected Output

- A valid Python function that performs all required validations without using any input-output examples in the prompt.
- CODE WITH OUTPUT:



**Task #2 – One-Shot Prompting with Edge Case Handling**

Objective

Use one-shot prompting to generate a Python function that calculates the factorial of a number.

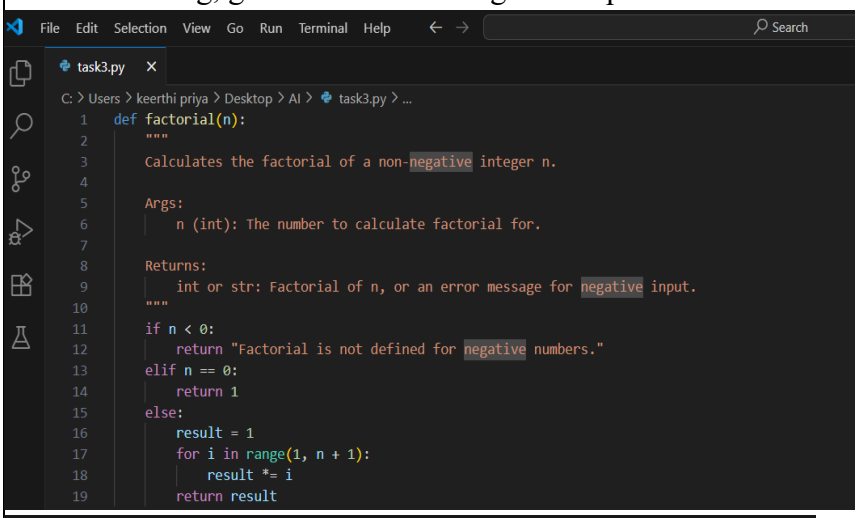
Requirements

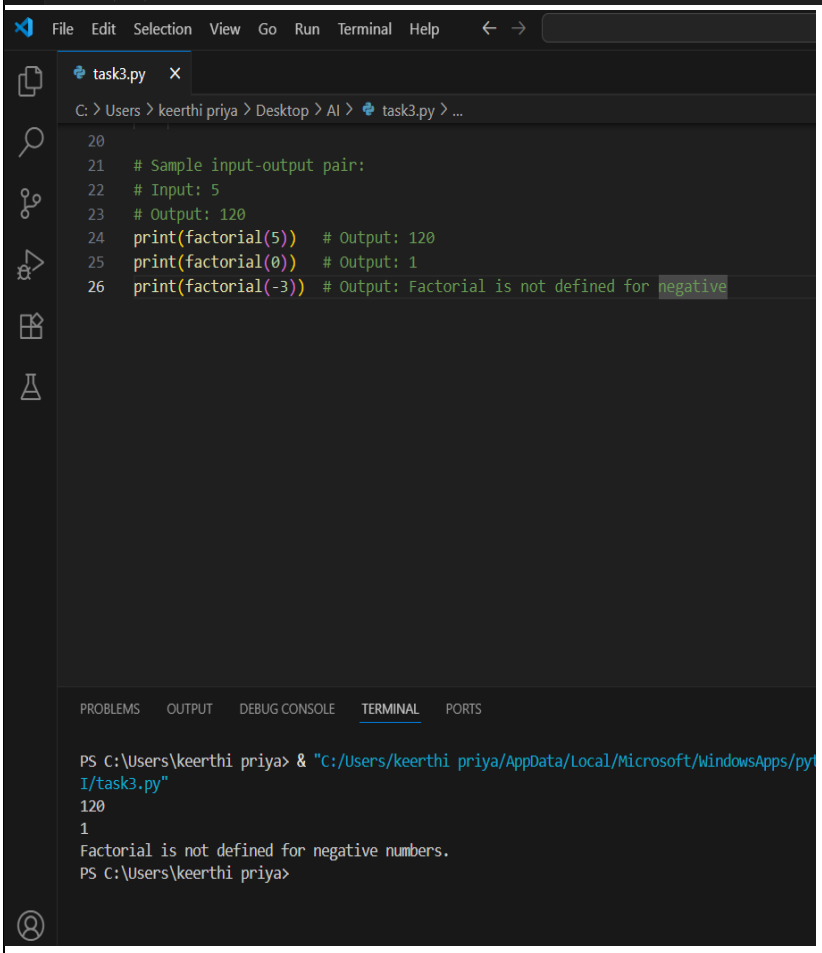
- Provide one sample input-output pair in the prompt to guide the AI.
- The function should handle:
  - 0! correctly

- Negative input by returning an appropriate message

Expected Output

- A Python function with correct factorial logic and edge case handling, generated from a single example.





## Task #3 – Few-Shot Prompting for Nested Dictionary Extraction

Objective

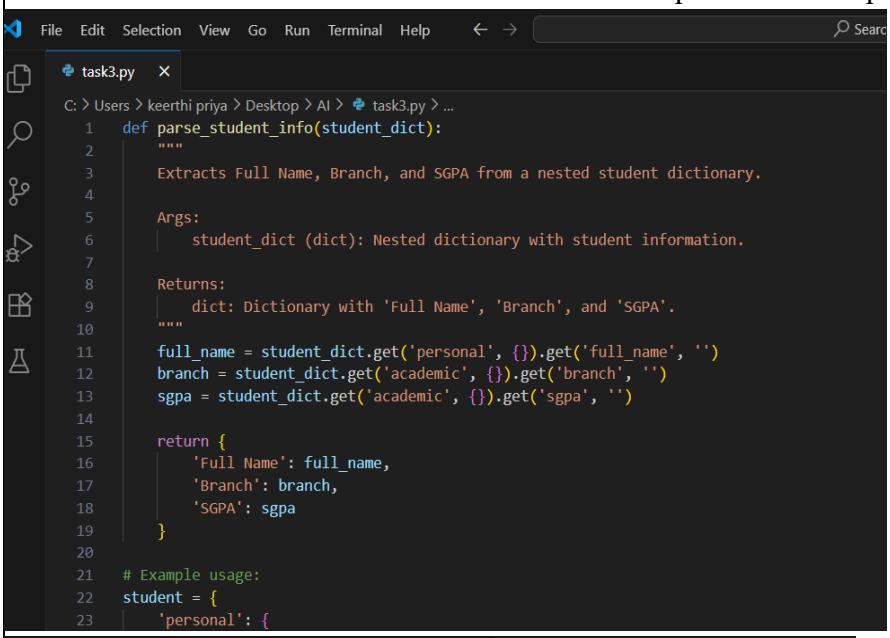
Use few-shot prompting (2–3 examples) to instruct the AI to create a function that parses a nested dictionary representing student information.

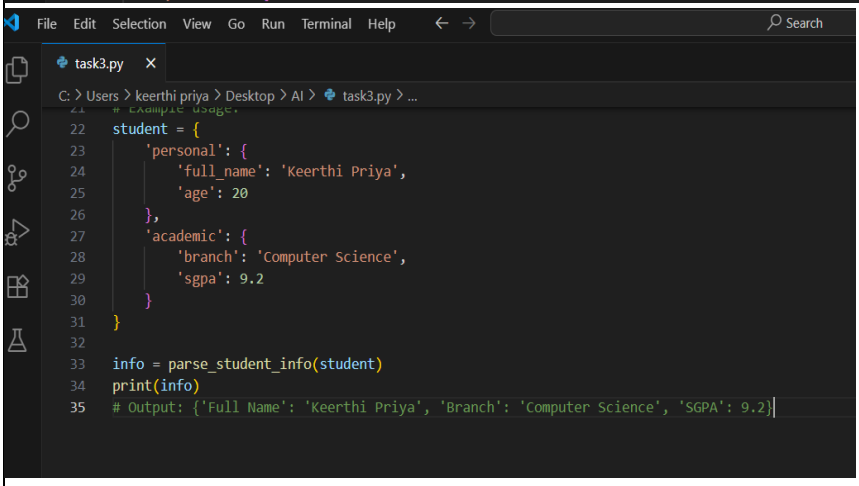
Requirements

- The function should extract and return:
  - Full Name
  - Branch
  - SGPA

Expected Output

- A reusable Python function that correctly navigates and extracts values from nested dictionaries based on the provided examples.





**Task #4 – Comparing Prompting Styles for File Analysis**

Objective

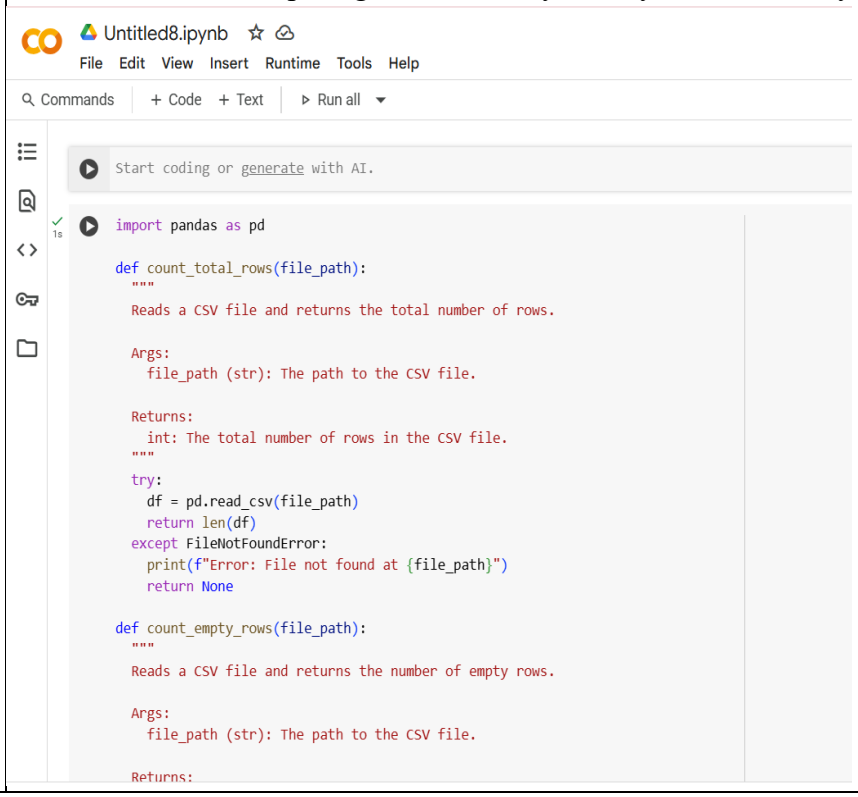
Experiment with zero-shot, one-shot, and few-shot prompting to generate functions for CSV file analysis.

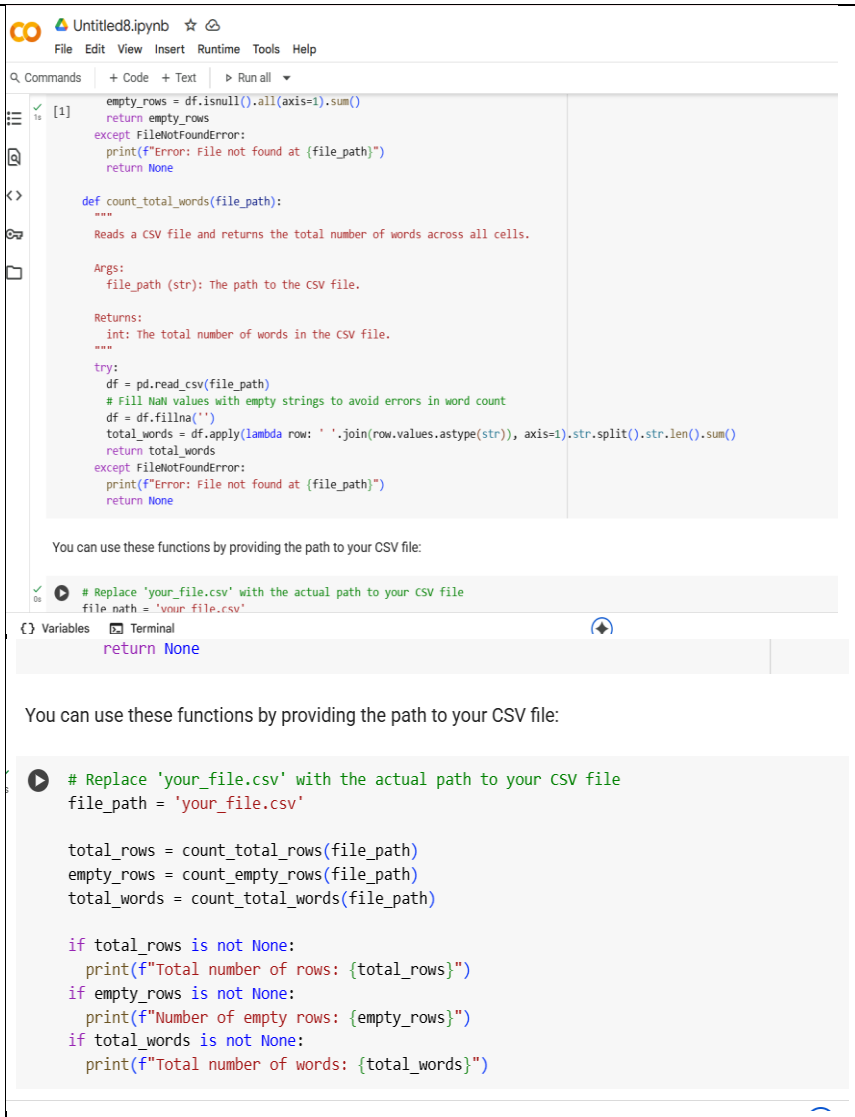
Requirements

- Each generated function should:
  - Read a .csv file
  - Return the total number of rows
  - Count the number of empty rows
  - Count the number of words across the file

Expected Output

- Working Python functions for each prompting style, with a brief reflection comparing their accuracy, clarity, and efficiency.





**Task #5 – Few-Shot Prompting for Text Processing and Word Frequency**

Objective

Use few-shot prompting (with at least 3 examples) to generate a Python function that processes text and analyzes word frequency.

Requirements

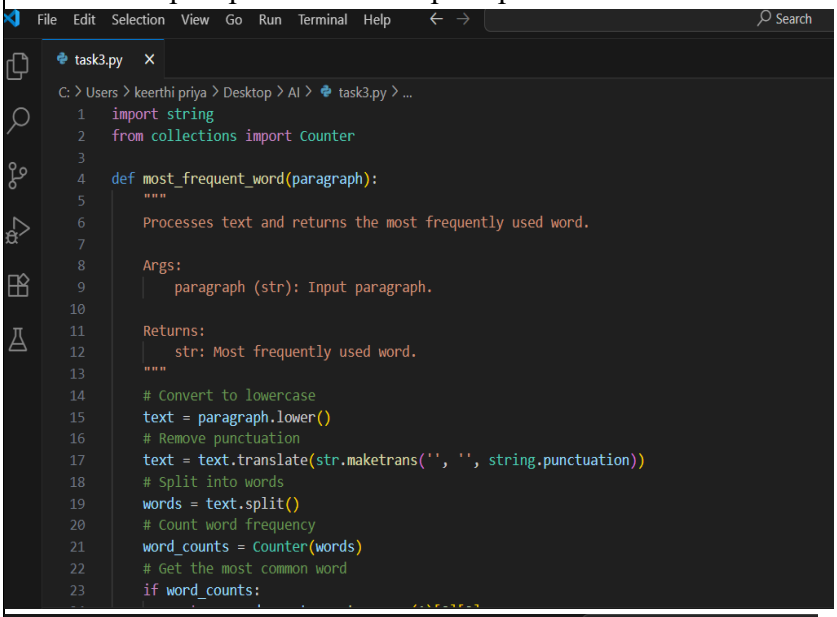
The function must:

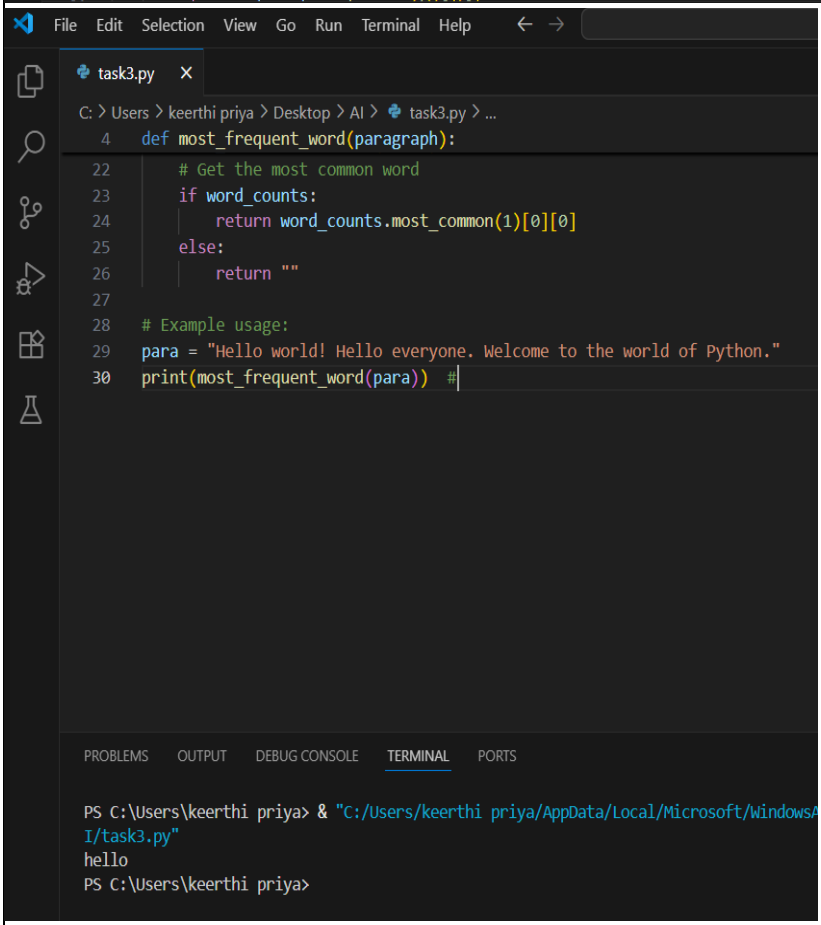
- Accept a paragraph as input
- Convert all text to lowercase
- Remove punctuation
- Return the most frequently used word

Expected Output

- A functional Python script that performs text cleaning,

tokenization, and returns the most common word using only the examples provided in the prompt





**Note:** Report should be submitted a word document for all tasks in a single document with prompts, comments & code explanation, and

output and if required, screenshots

**Evaluation Criteria:**

| Criteria | Max Marks |
|---|---|
| Zero Shot (Task #1) | 0.5 |
| One Shot (Task#2) | 0.5 |
| Few Shot (Task#3, Task#4 & Task #5) | 1.5 |
| **Total** | **2.5 Marks** |
